

MASTER PROMPT FOR GITHUB COPILOT

You are a Senior Frontend Engineer, Senior UI/UX Designer, and Senior Next.js Architect.

Build a **premium, modern, luxury fashion single-page ecommerce website** for a clothing brand.

Tech Stack

Use only:

- Next.js 15+ (App Router)
- TypeScript
- TailwindCSS
- React Server Components where appropriate
- Client Components only when interactivity is required
- Framer Motion for animations
- React Icons
- SwiperJS for carousels
- Zustand for cart state
- React Hook Form
- Zod validation
- Next/Image
- next/font/google
- Lucide Icons
- shadcn/ui components where useful

Code must be clean, modular, scalable and production-ready.

Use reusable components.

Never place everything inside page.tsx.

Organize everything professionally.

Example folder structure:

app/

page.tsx

components/

header/

hero/

products/

reviews/

checkout/

ui/

hooks/

lib/

services/

store/

types/

utils/

data/

public/

DESIGN

The website should feel like:

- Zara

- H&M
- Nike
- COS
- Adidas
- Alo
- Uniqlo

Modern

Minimal

Luxury

Responsive

Fast

Accessible

SEO friendly

Lighthouse score above 95.

Use smooth animations everywhere.

Use glassmorphism where appropriate.

Rounded corners.

Beautiful shadows.

Excellent typography.

Dark overlays on hero.

Micro interactions.

Hover animations.

Image zoom.

Button ripple.

Loading skeletons.

No ugly UI.

COLOR SYSTEM

Primary:

Black

White

Neutral Gray

Accent:

#111827

#F9FAFB

#E5E7EB

Use subtle gradients.

WEBSITE STRUCTURE

Everything must exist on ONE page.

No product pages.

No navigation to other pages except Privacy and Terms.

Everything happens using modals, drawers or smooth scrolling.

STICKY HEADER

Build a sticky header.

Include:

Logo

Small brand tagline

Navigation links that scroll smoothly

Collections

Reviews

FAQ

Story

Cart icon

Dynamic cart badge

Optional hamburger menu on mobile

Header becomes slightly transparent on scroll.

Blur background.

Shadow appears on scroll.

HERO SECTION

Large premium hero.

Include:

Auto-playing muted fashion video.

If video unavailable, use beautiful hero image.

Large headline.

Luxury subheadline.

CTA button:

Shop Collection

Scroll smoothly to products.

Secondary CTA:

Explore New Arrivals

Trust badges underneath:

Free Shipping

30 Day Returns

Premium Quality

10,000+ Customers

Animate everything beautifully.

CATEGORY FILTER

Sticky category pills.

Examples:

All

Men

Women

T-Shirts

Shirts

Pants

Hoodies

Accessories

JavaScript filtering only.

No page reload.

Animated transitions.

PRODUCT GRID

Responsive grid.

Desktop:

4 columns.

Tablet:

2 columns.

Mobile:

1 column.

Every product card contains:

Large product image

Hover secondary image

Wishlist heart

Sale badge

Low stock badge

Best Seller badge

Rating stars

Review count

Product title

Brand

Category

Original price

Sale price

Discount percentage

Color swatches

Size selector

Quick Add button

View Details button

Hover animation

Image zoom

Elegant card shadow

Lazy loading

Next/Image optimization

PRODUCT MODAL

Clicking a product opens a beautiful modal.

Include:

Large gallery

Thumbnail images

Zoom effect

Product description

Materials

Features

Size chart modal

Quantity selector

Color selection

Size selection

Related products

Customers also bought

Add to cart button

Buy now button

Animated transitions.

ESC closes modal.

Click outside closes modal.

CART DRAWER

Clicking cart opens right drawer.

Include:

Product thumbnail

Name

Price

Quantity

Subtotal

Remove item

Increase quantity

Decrease quantity

Continue shopping

Checkout button

Drawer slides smoothly.

Cart persists using Zustand.

Use Local Storage persistence.

MOBILE BUY BAR

Always visible on mobile.

Contains:

Current subtotal

Add to Cart button

Sticky bottom.

SOCIAL PROOF

After second product row insert:

Customer reviews carousel

Use SwiperJS.

Each review includes:

Customer photo

Stars

Verified badge

Comment

Product purchased

Scrolling autoplay.

AS SEEN ON

Horizontal logos.

Examples:

Vogue

GQ

Forbes

Elle

FashionBeans

Use grayscale logos.

Hover color effect.

UGC SECTION

Instagram style gallery.

Pinterest layout.

Click opens lightbox.

Lightbox shows tagged product.

User can add directly to cart.

GUARANTEE SECTION

Three columns.

Secure Checkout

30 Day Returns

Ships in 24 Hours

Nice icons.

Animated.

BRAND STORY

Very short.

Two paragraphs maximum.

Luxury storytelling.

Background image.

FAQ

Accordion.

Questions:

Shipping

Returns

Sizing

Materials

Payments

Order Tracking

SEO friendly.

FOOTER

Minimal.

Privacy

Terms

Instagram

TikTok

Facebook

Copyright

Newsletter

CHECKOUT BLOCK

Checkout remains on same page.

Contains:

Order summary

Shipping calculator

Billing form

Payment icons

Credit Card

Apple Pay

Google Pay

PayPal

Shop Pay

Large

"Pay Securely Now"

button.

Below button:

 Your payment is encrypted and secure.

ANIMATIONS

Use Framer Motion.

Animate:

Hero

Cards

Sections

Buttons

Filters

Modal

Drawer

Hover

Fade

Slide

Scale

Parallax

Smooth scrolling.

Never overdo animations.

RESPONSIVENESS

Perfect on:

320px

375px

425px

768px

1024px

1280px

1440px

1920px

PERFORMANCE

Use:

Suspense

Lazy loading

Dynamic imports

Image optimization

Memoization

Loading skeletons

Error boundaries

Server Components where possible

Avoid unnecessary rerenders.

SEO

Implement:

Metadata

Open Graph

Twitter Cards

Structured Data (JSON-LD)

Product schema

Organization schema

FAQ schema

Canonical URL

Robots metadata

Semantic HTML

Alt texts

ARIA labels

ACCESSIBILITY

Keyboard navigation

Screen reader support

Focus states

Contrast compliance

Accessible modals

Accessible drawers

Accessible accordions

STATE MANAGEMENT

Use Zustand.

Store:

Cart

Wishlist

Selected category

Filters

Product modal

Checkout state

Persist cart.

API IMPLEMENTATION

Create a dedicated service layer.

services/

products.ts

Implement robust fetching with retry logic, loading states, caching, and graceful error handling.

Primary API (free)

Use the Fake Store API as the first source for clothing products:

- <https://fakestoreapi.com/products/category/men's%20clothing>
- <https://fakestoreapi.com/products/category/women's%20clothing>

Secondary/Fallback APIs

If the primary request fails, automatically try these free public APIs in order:

1. DummyJSON Products
 - <https://dummyjson.com/products/category/mens-shirts>
 - <https://dummyjson.com/products/category/womens-dresses>
 - <https://dummyjson.com/products/category/mens-shoes>
 - <https://dummyjson.com/products/category/womens-shoes>
2. Escuelajs Fake Store API
 - <https://api.escuelajs.co/api/v1/products>

Normalize all API responses into a single Product interface:

```
interface Product {
```

```
  id: number;
```

```
  title: string;
```

```
  description: string;
```

```
  price: number;
```

```
  originalPrice?: number;
```

```
  discountPercentage?: number;
```

```
  category: string;
```

```
  brand?: string;
```

```
  rating: number;
```

```
  stock: number;
```

```
  images: string[];
```

```
thumbnail: string;  
colors?: string[];  
sizes?: string[];  
}
```

Requirements:

- Normalize differing response formats.
- Deduplicate products by ID/title.
- Generate realistic placeholder sizes (S, M, L, XL) and color swatches if the API doesn't provide them.
- Cache responses to reduce repeat requests.
- Display loading skeletons while fetching.
- Show a friendly error UI with a retry button if all APIs fail.

EXTRA FEATURES

Implement:

Wishlist

Recently Viewed

Featured Collection

New Arrivals

Trending Products

Infinite Scroll or Load More

Search bar

Sort by:

Newest

Price Low-High

Price High-Low

Popularity

Highest Rated

Discount

Price range slider

Toast notifications

Coupon input UI

Newsletter popup

Back to top button

Dark mode toggle

Recently added animation

Floating WhatsApp chat button (UI only)

CODE QUALITY

Every component must:

- Be fully typed with TypeScript.
- Use reusable props and interfaces.
- Avoid duplicated logic.
- Follow ESLint best practices.
- Be production-ready.
- Include comments only where they improve clarity.

Do not generate placeholder TODOs or incomplete implementations. Build the application as if it will be deployed to production immediately. Implement the page incrementally with reusable components, verify each section works before moving to the next, and ensure all interactions, animations, state management, API integration, responsiveness, and accessibility are fully functional.
